

Product information "Lalizou baby nest seat belt system"

The baby lounge seat belt system allows you to put your child into the Lalizou without worrying about it falling off the Lalizou or rolling off. Especially when your child starts crawling and tends not to lie still on its back, it becomes very helpful. With this assurance, you don't have to constantly stay right next to the Lalizou and your child, but you can meanwhile do tasks around the house within sight.

Instructions for use:

How do I use the seat belt system of the baby lounge correctly?

To buckle up your baby easily and safely, you first thread the two lower hooks of the seat belt system into the corresponding webbing loops of the Lalizou baby lounge and fold the buckling system towards the lower end. Then open the buckles on the seat belt system and thread the adjustment elements with hooks (make sure that the open side of the hook points towards the lower end!) into the matching loops and fold them outwards. Now place your baby on the baby lounge, fold the seat belt system onto your baby and close the buckles with the side parts.
